Prepare both a summary paragraph and a general description of the resource and its various elements as it exists today.

These two individual two-bay-wide, two-story brick houses with low-pitched gable roofs are typical of the small alley houses built in Baltimore in the 1850s and 1860s, often along especially narrow secondary alley streets running perpendicularly off the main "alley" street. The houses retain their original brick facades, which were always painted.

The houses are two stories in height, 12' and 12'3" wide and occupy lots 42' and 62'5" deep, respectively. Each house is only two-rooms deep. The pitch of the gable roof is especially low at 829 Boyd St., a characteristic of this particular type of two-story, gable-roofed alley house; at 831 it is steeper, as in early two-and-a-half story houses but there is no dormer window. The houses are constructed in common bond, which was always painted. Each house has a simple brick corbelled cornice. Chimneys are located on both the front and rear slopes of the gable roof.

829 Boyd St. has segmentally arched brick lintels and wood sills; 831 has flat wood lintels and sills on first floor openings, but no lintels on second floor openings. All windows are filled with 1/1 replacement sash. Doorways have single-light transoms and both doors are modern replacements. The houses sit on low basements, lit by a narrow sash. The entrances are reached by two or three concrete steps.

The houses are basically two rooms deep, with the front room being entered directly from the front door. The front and back rooms of the first floor are separated by a wide opening, with the tightly winding, narrow stairs set in the rear room, in the space between the partition wall and the fireplace.

Builder/Architect

Prepare both a summary paragraph of significance and a general statement of history and support.

These houses are significant as representing a very plain type of small street house that was constructed to provide inexpensive housing for the working class residents of the area, most of whom were German or Irish at the time of construction. The houses were built according to a pattern that was quite common to the city's working class neighborhoods of the middle and late nineteenth century. Recognizing that workers held different levels of jobs (and pay), builders created a hierarchy of house sizes (and prices) in the new neighborhoods going up to serve the expanding factory districts ringing the harbor and north-east and southwest of the central city. Builders acquired anywhere from an eighth to a half of a city block and built 14' to 15'-wide two-story houses on the main streets, and smaller, 11' to 13'-wide two-story houses on the narrower streets bisecting the blocks. Typically, in this period, main street houses might sell \$1,000 - \$1,500; small street houses for \$600 - \$800. Occasionally, the builder retained ownership of his small street houses to provide income for himself as rental properties. In this way people of varying means could afford to live in the same block. If they couldn't afford the purchase price of the small street houses, then they *could* afford the \$8 or so a month it would cost to rent one, while they saved to be able to buy their own home later.

The houses are especially significant because of their proximity to the Baltimore & Ohio railroad yards, the nation's first railroad, and its related railroad-oriented industries, like car and rail shops. Housing of this type was built to provide inexpensive housing for the wide variety of both Irish and German immigrants who came to southwest Baltimore to work in railroad-related industries in the decade before the Civil War.
